Connect to Lehi1 with Mac OS 10.3

In the finder click on the go menu and select connect to server.

In the Dialog box type in smb://lehi1/username$ if you click on the plus button this address will be saved as a Favorite server so you will not need to remember the path. Click connect.

Make sure BYUI is in workgroup/domain, type in your user name and password, and click OK.

The share will mount on your desktop. You can create an alias in the folder of your choice by dropping the icon of the share on that folder. An alias will be created when the mouse arrow hooks.
