You can access this course at I-Learn (if you are registered for it).

2 Catalog Description
Planned and supervised practical experience in vocational or educational settings. Interns acquire practical skills while applying classroom theory and principles.

3 Objectives
As an intern you should:

1. Work full-time under the direction and supervision of an experienced mentor.
2. Contribute skills learned in completed coursework to a collaborative software development effort.
3. Learn new skills, technologies and methodologies.

4 Prerequisites
- CS 246 Software Design and Development, and
- consent of the Department Internship Coordinator.

5 Requirements
You are required to...

1. Keep a daily journal wherein you record details of what you are learning, and just as importantly, what you are teaching (or contributing to) your employer.
2. Submit a final written report summarizing your work experience. Clearly state:
   - your personal role,
   - specific accomplishments and contributions made,
   - lessons learned,
   - skills gained,
   - recommendations made (and heeded, if applicable), and
   - perspective acquired about the industry and your vision of where you might fit in it.
